

# Tiktaka Examples

Tiktaka is a fantastic new logic puzzle.

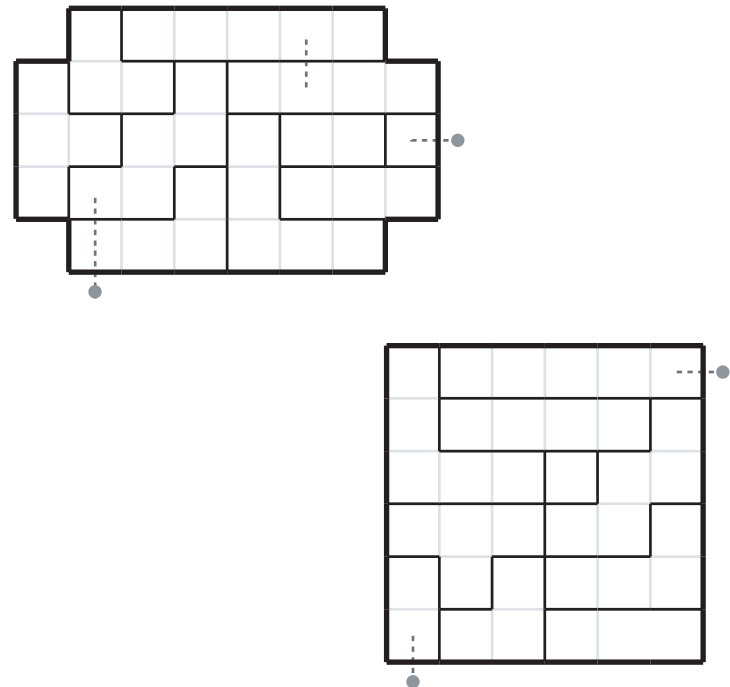

Each puzzle consists of two grids constructed using the same set of shapes. A path must be drawn through each grid so that each shape is visited exactly once. The ends of the path and some of the inner route may be provided.

Importantly, where the route passes through identical shapes the path must look the same. The path could be rotated, reflected or both. To illustrate this, look at how the path is drawn through the "T" shape in the first puzzle.
